**These may look REFRESHING - BUT once you look closer you'll see the truth!**

# WELCOME!

There are a lot of secrets in this industry. To begin, we'd like to explain that the **BIGGEST** secret is that each **ALKALINE WATER SOURCE is EXTREMELY** different from one another.

This may not sound **CRUCIAL**, but it plays a **HUGE ROLE** in whether the alkaline water that you're drinking will even give you some **HEALTH BENEFITS** that you'd expect other than just hydrating you.

So stick around and read through this guide **CAREFULLY** in order to discover all of the life-changing alkaline water secrets. Doing so will help ensure that you and your family are getting the healthiest alkaline water possible!

# WHAT IS ALKALINE WATER?

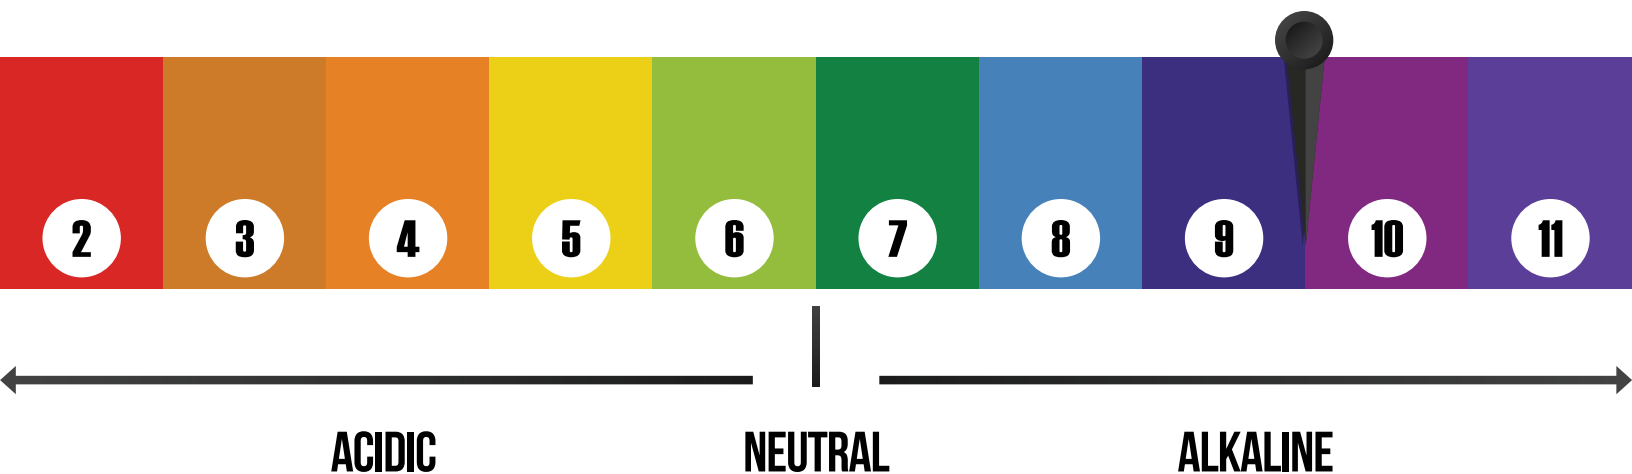

The pH scale runs from 0 to 14. The neutral level of water is between 7 to 7.4, which is where your tap water should sit (and we know this isn't always the case with water from municipal sources).

**Water below a pH of 7 is acidic, while water that has a pH above 7.4 is considered to be alkaline.**

Alkaline water for drinking has pH levels of 8 to 9.5. Depending on how it is made, it also contains antioxidants and ions that provide additional health benefits apart from hydration.

**Want to know more about the different types of alkaline water you can drink and buy?**

**READ ON TO FIND OUT MORE!**

# WHAT TYPES OF ALKALINE WATER ARE AVAILABLE?

Here are some of the most popular sources of this alkaline water.

## A Quick List of the Types of Alkaline Water Available

- Natural Alkaline Water
- Bottled Alkaline Water
- Ionized Alkaline Water
- Alkaline Water from Alkalizer Pitchers, Sticks or Packets

### 1. Natural Alkaline Water

You can find this type of alkaline water in springs and wells, where the water absorbs minerals that raise its pH levels naturally. Some places where you can find this kind of water include:

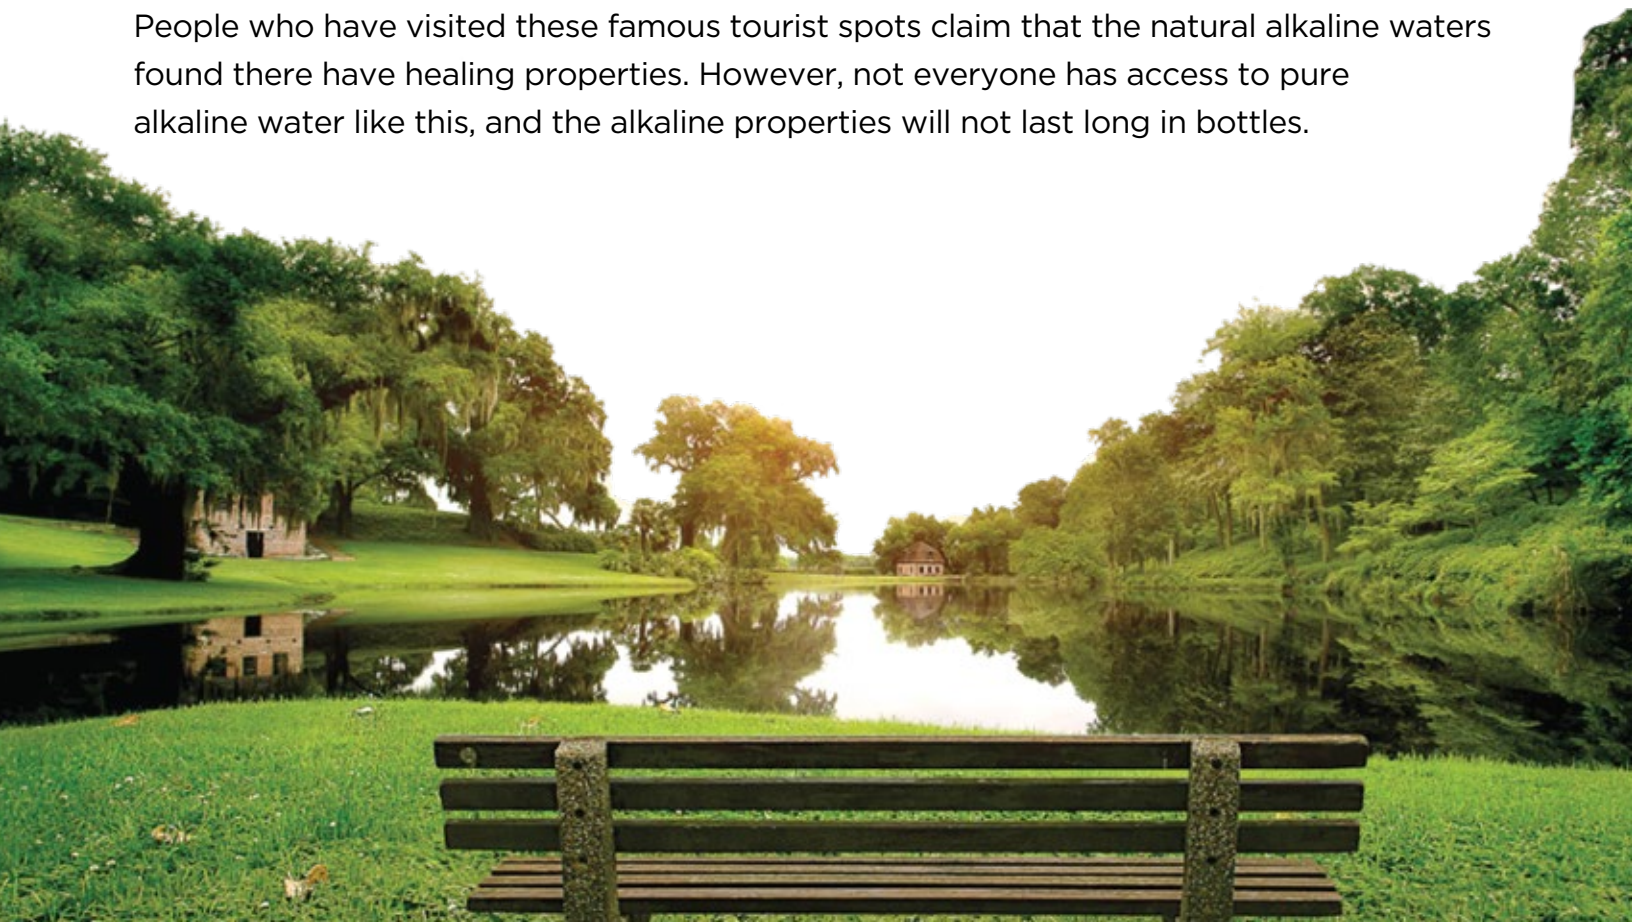

**Lourdes,  
France**

**Tlacote,  
Mexico**

**Delhi,  
India**

**Nordenau,  
Germany**

People who have visited these famous tourist spots claim that the natural alkaline waters found there have healing properties. However, not everyone has access to pure alkaline water like this, and the alkaline properties will not last long in bottles.

# BOTTLED ALKALINE WATER

Only about 3% of bottled alkaline water is from a natural source like a spring.

Most of times it's simply just repackaged tap water with added baking soda and/or minerals that raise the pH. This type of bottled alkaline water is artificial and can be made at home pretty easily - not that you'd want to.

Most of the time, it's this type of low quality alkaline water that's poured into plastic bottles and put on display in supermarkets.

**Bottled Alkaline Water just doesn't  
have the ingredient that makes it**

**HEALTHY!**

# IONIZED ALKALINE WATER FROM A QUALITY WATER IONIZER

**ULTRA-HEALTHY, FRESH AND EASY TO GET!**

Using a quality water ionizer to create alkaline water is the **FRESHEST** and **HEALTHIEST** way to drink alkaline water. **Period!** Read on and you'll discover how there really is **JUST NO COMPARISON!**

This kind of alkaline water is produced by electrolysis and filtration by a machine called a water ionizer, which typically means that it's a chemical-free process (be sure to insist on a chemical-free ionizer). Water is separated into two streams depending on their charge and is then passed through multi-membrane filters.

It's also the kind of alkaline water that's readily available in your home, as long as you have your own ionizer.

Curious about ionized alkaline water? We'll talk more about it in this guide, so **KEEP READING!**

# ALKALINE WATER FROM ALKALIZER PITCHERS, STICKS OR PACKETS

## THE PROBLEM

The way that alkaline water is made from using alkalizer pitchers, sticks or packets is created is through a cheap mineral additive.

Sometimes baking soda is added as well to boost the pH. Read more about these in full over the next few pages.

## THE BEST SOLUTION

You can **FINANCE** a top quality water ionizer for about \$25 month, which is the the same price you'd pay for these - and drink water that's **MUCH HEALTHIER!**

There are over 1000 studies on the health benefits of water produced from  
**QUALITY WATER IONIZERS!**

# 10 MISTAKES ALKALINE WATER BUYERS MAKE

Now that you know more about alkaline water, you might think you're ready to start drinking it and witnessing amazing results!

But before you add anything to your cart, read on to see **10 COMMON MISTAKES** of first-time buyers so you can avoid them and choose better for your health and family when you do decide to dive into the world of alkaline water.

## 1 BUYING BOTTLED ALKALINE WATER

The ionization and antioxidant properties of bottled alkaline water fade over time, which means you'll be getting slightly alkaline or even regular water by the time you remove the bottlecap. You won't be able to experience any of the health benefits that fresh alkaline water gives.

Additionally, plastic bottles aren't good for the environment, and this practice isn't convenient in the long run because you'll have to buy bottles again and again just to maintain your supply of alkaline water that isn't fresh at all.

**BEWARE!** Hundreds of microplastics are in bottled water!

### 3 Buying An Alkaline Water Pitcher

The **BIGGEST PROBLEM** with alkaline water pitchers is that you don't get the antioxidants or the molecular hydrogen that you can only get from a quality water ionizer.

An alkaline water pitcher is a plastic pitcher fitted with a filter inside. Unfortunately, it's usually slow at filtering your water, and depending on the sizes of the pitcher and your household, one unit may not be enough to support your daily hydration needs.

Not only that, but its filters can't remove the harshest contaminants found in your tap water and tend to collect bacteria over time if they're not cleaned often.

Unfortunately, the filters of these pitchers typically have lifespans of less than 6 months, meaning you'll be spending more on changing filters for a tiny container.

### 4 Buying Alkaline Water Sticks

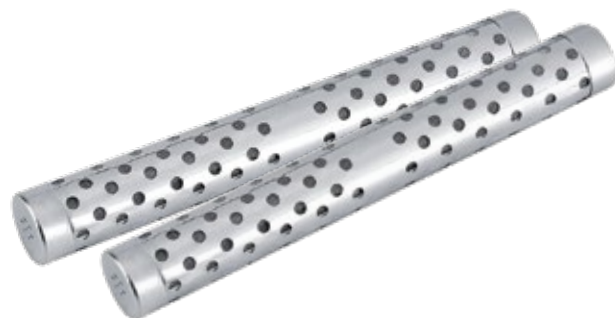

These small metallic sticks contain mineral stones and powders that filter and alkalize your water once you drop it inside a container and shake it. The filtering part of a water stick leaves a lot to be desired since there is no point in time where the water that you start with runs through an actual filter – such as a mesh that can trap and remove dangerous contaminants.

Instead, the contaminants remain in your water and a chemical is used to “clean” them. While it seems like a convenient solution, it actually takes more work to use because it can only alkalize around one bottle of water at a time.

A much better choice is to opt for a premium water ionizer that can remove over 200 contaminants such as a Tyent water ionizer.

This stick can be hit-or-miss, especially if you get a cheap one, and there's no telling how long it can last because it doesn't have an electric tracker that notifies you about the lifespan of its stones and powders. Plus, it lacks a key ingredient that's only present in alkaline water from a water ionizer, which is what makes alkaline water healthy in the first place!

**KEEP READING TO FIND OUT MORE!**

## 5 Buying From An MLM Company

Some companies charge exorbitant prices for their so-so ionizers just to pay off endless levels of commissions. Enagic (also known as Kangen), AlkaViva and Vollara are three of the companies who operate like this.

If you purchase from these brands, you may be buying a machine with outdated technology and not getting the full health benefits that the best alkaline water from a more modern unit can offer.

Plus, these machines may have limited trial periods and warranties with an endless amount of **FINE PRINT**.

**SAY NO TO MARKETING SCAMS**

Instead, get your money's worth by ordering a high-tech unit from a reputable company with transparent and supportive customer service and no-stipulations lifetime warranties.

**BEWARE!**

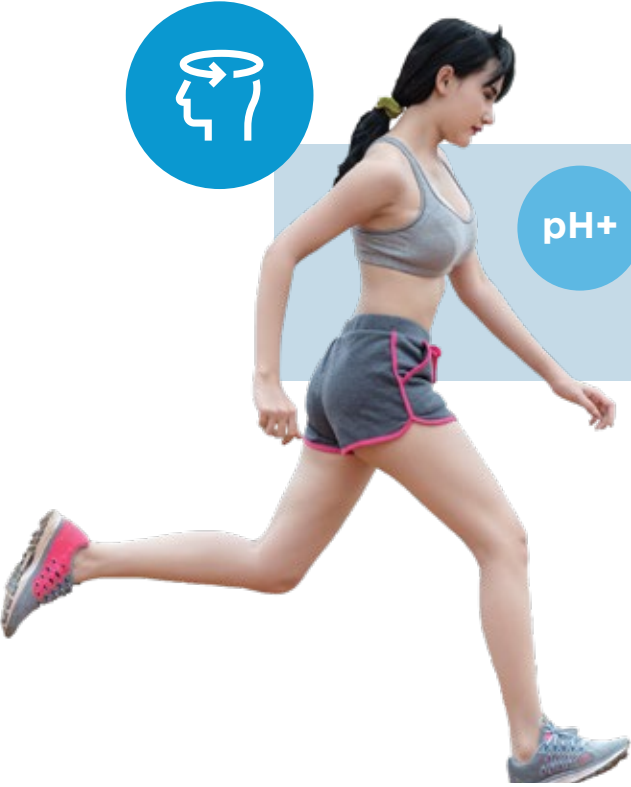

pH+

## 6 Drinking Higher pH Levels Right Away

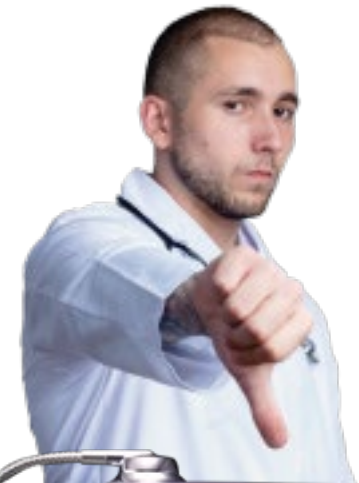

Making gradual adjustments is the key to sustaining change. So, when you introduce your body to alkaline water, drink a certain level for a few weeks and increase your intake slowly to make sure that you properly adjust to this higher-pH water.

## 7 Buying A Convertible Water Ionizer

Having a machine that can adapt to any kind of sink sounds like a deal that's too good to be true, and it is. **DO NOT** purchase this type of ionizer because its parts are not sturdy or effective unlike the parts of units that are made to go on top of or beneath your counter.

Instead, go for either an above-counter or under-counter ionizer depending on your needs and sink space. The most effective and advanced ionizers are created to fit only one kind of position, so choose wisely.

## 8 Getting An Ionizer With 1 Filter

Speaking of outdated technology, the best ionizers today have two large filters with powerful filtration that is on the same level as that of a kidney dialysis machine. These filters also use a lot of high-quality material to get rid of large particles and microscopic contaminants and balance the ions in your water.

Going for a machine with just 1 filter, especially if its size isn't up to par with the new standard, means you risk drinking alkaline water that isn't as clean as it should be. We recommend going for filters with ceramic material, which is guaranteed to give you top-notch filtration.

## 9 Buying An Ionizer With Less Than 7 Plates

Plates are one of the most - if not, the most - important parts of a water ionizer unless it's a Hybrid. Their size and quality determine how effectively an ionizer can perform electrolysis and achieve the optimal pH and -ORP levels to give you the healthiest alkaline water.

Today's top-selling ionizers like Tyent's ionizers have between 11 to 13 plates that are dipped multiple times in platinum for extra strength, so don't miss out on the benefits of more powerful ionizers by getting an older unit with fewer plates.

## 10 Waiting Months for a “Custom-Built” Ionizer

The best ionizers are finished before you order them. So, any company claiming they can build one for you is lying!

This means they will order the parts from overseas and charge you higher prices for unnecessary components. They will also make you wait **MORE THAN A MONTH** for the unit.

It's better to choose an existing ionizer from a trusted brand.

# BONUS SECRET REVEALED!

All along we've hinted that there is a **SPECIAL SECRET INGREDIENT** in **ONLY SOME TYPES** of alkaline water.

## WHAT IS IT?

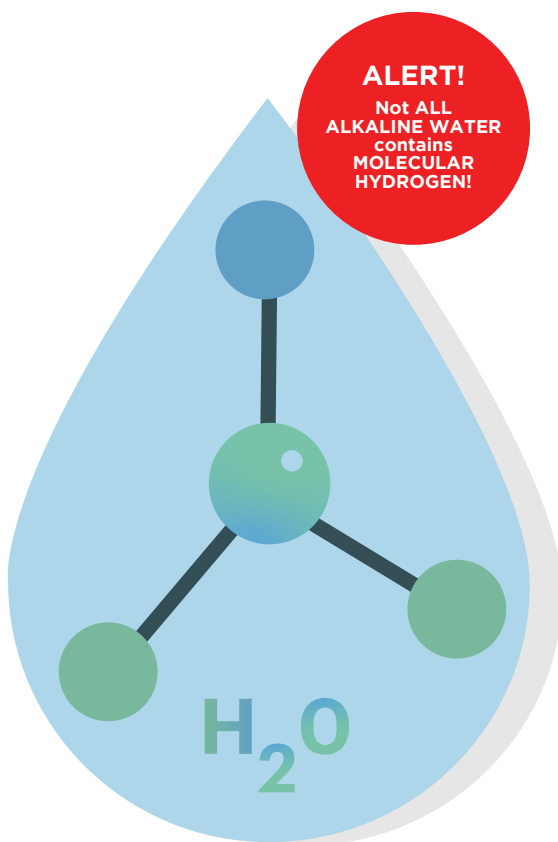

### Drum Roll Please!

This ingredient is called **MOLECULAR HYDROGEN**, and you can only get it from a **HIGH QUALITY WATER IONIZER** such as a **Tyent water ionizer**.

# MOLECULAR HYDROGEN IN ALKALINE WATER?

The benefits of ionized alkaline water are endless, but you may still have some questions about how it holds up compared to other kinds of water.

## What Is Molecular Hydrogen?

Also known as  $H_2$ , molecular hydrogen refers to two bonded hydrogen molecules.

It's the smallest and most powerful antioxidant on the planet, and it's responsible for many of the amazing benefits you can get from drinking alkaline water.

It plays a huge role in:

- 💧 **Detoxifying your body**
- 💧 **Boosting your energy levels naturally**
- 💧 **Increasing your weight loss**
- 💧 **Providing age-defying properties**
- 💧 **Supporting a healthy immune system**
- 💧 **Enhancing focus and concentration levels**
- 💧 **Supporting your gut and heart health**
- 💧 **Maintaining your dental hygiene**
- 💧 **Faster post-exercise recovery**

And so much more!

## OVER 1,000 CLINICAL STUDIES

These show the therapeutic potential of molecular hydrogen.  
We're sure there will be many others!

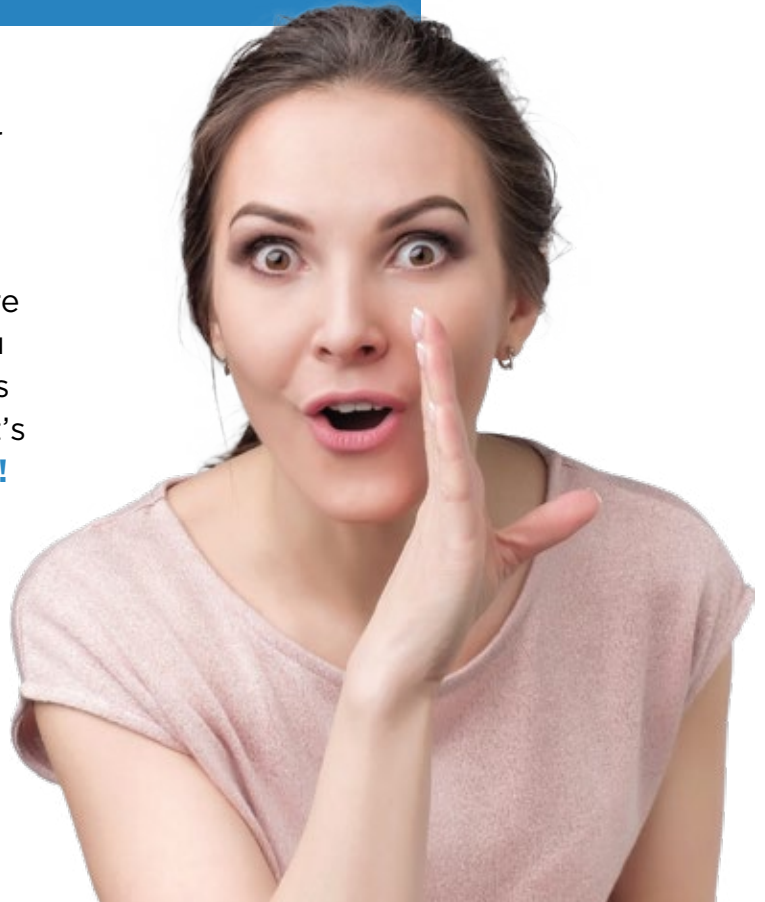

# 7 ALKALINE WATER SECRETS REVEALED

Congratulations, you're a few steps closer to being ready to drink the healthiest type of alkaline water forever!

We're through with the negatives, so we're going to share the positives by telling you the **TOP 7 REASONS** that alkaline water is the best water you can drink but only if it's the **RIGHT TYPE OF ALKALINE WATER!**

Keep reading to be amazed by the difference!

**WHAT'S BEHIND THE CURTAIN?  
GREAT STUFF!!!**

**1**

## **Alkaline Water from a PREMIUM WATER IONIZER is More Hydrating**

Water on its own is naturally hydrating, but alkaline water is full of minerals and antioxidants that hydrate your body on the inside and outside but only if it has **Molecular Hydrogen**. The antioxidant properties of alkaline water also deliver a refreshing kick of energy to your system, down to the cellular level. You can credit the health benefits of alkaline water to the special qualities of molecular hydrogen.

To know more about molecular hydrogen, check out the next few pages of this guide.

2

## Alkaline Water from a PREMIUM WATER IONIZER Sharpens Your Mind

Dehydration can significantly affect your performance because your brain is made up of 73% water.

While regular water can do a perfectly decent job of hydrating you, only alkaline water with molecular hydrogen can give you a significant boost in energy. Alkaline water has been shown to improve cognitive function and wake up your brain on your most exhausting days thanks to the presence of essential minerals and antioxidants like molecular hydrogen.

3

## Alkaline Water from a PREMIUM WATER IONIZER helps You Lose Weight

Did you know that a cold glass of alkaline water can speed up your metabolism? Again, it's all thanks to our bodies being made up of at least 70% water. Alkaline water that's been chilled forces your body to use up energy to adjust the temperature internally, which leads to a higher metabolic rate.

Drinking a full glass of alkaline water before every meal can also help you curb your cravings, keeping you satisfied even before you eat. Plus, water is essential during exercise: it distributes the necessary minerals within your body to keep your muscles from cramping, aiding in gradual weight loss.

4

## Alkaline Water from a PREMIUM WATER IONIZER is Cleaner Than Tap Water

After the Flint water crisis, we all started to doubt the safety of the water that comes from our faucets, and for good reason. The reality is that the regulation and quality of tap water is inconsistent despite the processes in municipal treatment plants, so you may actually still be drinking a glass full of dangerous particles, contaminants, and bacteria.

Even if your tap water may be clean, it can get contaminated with rust when it passes through old and dirty pipes. With alkaline water, especially the kind produced by high quality ionizers, all of these toxins will be removed through a rigorous filtering process.

### FUN FACT:

Tyent Water Ionizers remove **OVER 200 DANGEROUS CONTAMINANTS** and have the same filtration levels as kidney dialysis machine.

5

## Alkaline Water from a PREMIUM WATER IONIZER helps Combat Aging

Hydration is one of our most important needs. So stay healthy and youthful by drinking the best kind of water that you can get. The bioavailable antioxidants in ionized water fight off free radicals, which are molecules that damage your cells and cause sickness.

The hydrogen that's present in alkaline water can also keep wrinkles at bay and help keep you looking and feeling your best!

6

## Alkaline Water from a PREMIUM WATER IONIZER Promotes a Healthy Immune System

Mineral-rich alkaline water provides hydrogen and a lot of the essential minerals that your body needs to function at its best, such as zinc and calcium. Drinking water does more than just provide hydration, it distributes minerals and nutrients all across your cells. Water that contains molecular hydrogen is actually able to pass through the blood brain barrier.

Alkaline water can also help your systems recharge and repair themselves while you sleep, so be sure to stay hydrated throughout the day. Then replenish the fuel you lost and give your body a hand with maintaining its pH by drinking a glass of alkaline water in the morning.

7

## Alkaline Water from a PREMIUM WATER IONIZER is Great for DOGS and LARGE ANIMALS LIKE HORSES

Did you know that dogs & large animals experience the same health benefits humans do when they drink alkaline water? Test this for yourself by giving your dog a bowl of high pH water! Apart from increased energy and ultra hydration, your fur babies will also have:

- 💧 **Smoother and shinier coats**
- 💧 **Consistently wet noses**
- 💧 **Better-smelling breath**

## Is this true for ALL kinds of alkaline water?

We wish we could say yes, but again, alkaline water sources are not the same.

Most companies do the bare minimum to give you slightly alkaline water, while only one brand of alkaline water reaches for the stars.

Which source is this? You'll find out more on [page 36!](#)

# 8 ALKALINE WATER COSTS & COMPARISONS

## An Overview of Yearly Water Costs

The benefits of ionized alkaline water are endless, but you may still have some questions about how it holds up compared to other kinds of water.

To give you a better idea of the long-term picture, let's compare the costs of alkaline water from an ionizer and other types of water and filters over the span of 10 years.

## Ionized Alkaline Water vs. Bottled Alkaline Water

We've talked about bottled alkaline water earlier in this guide. Now, we want to reiterate that most bottled water is just municipal water that's repackaged into a bottle. Sometimes it's even contaminated with bacteria and plastic chemicals. Plus, it far from being cost-effective as well.

Let's say you buy 2 liters of bottled alkaline water per day for \$2 each (the cost of Essentia). Your expenses would look like this:

✓ Daily: **\$4** | ✓ Yearly: **\$1,440** | ✓ After 10 years: **\$14,400**

Plus that's not even enough water for the day. Then, if you add in other people from your household - well you're looking at a lot more than \$14,400 after 10 years.

Meanwhile, alkaline water from a quality water ionizer costs only about 6¢ per glass, a much better deal compared to the price you'll pay for mountains of plastic and subpar water quality without any antioxidants or molecular hydrogen.

# 1 DANGERS OF BOTTLED ALKALINE WATER

If you want an alkaline water source that's both healthy and convenient, getting the bottled counterpart isn't it. Avoid bottled alkaline water for these **3 MAJOR NO-NOS!**

## It Lacks Molecular Hydrogen

This super-antioxidant is the secret ingredient in the healthiest alkaline water, like that of Tyent. Since molecular hydrogen doesn't last in plastic bottles, you won't experience its many health benefits. What you WILL experience with bottled alkaline water are:

- Alkalinity dissipating over time — unless it's achieved chemically
- Higher caloric content with unnecessary flavors
- No filtration reports from manufacturers

When you choose higher pH water, go for the best: chemical-free and hydrogen-rich alkaline water from your very own top-of-the-line water ionizer.

## It Contains Particles

Plastic bottles have never been 100% clean, and that's partly because you always face the risk of microplastic contamination.

Additionally, a bottle that's left under the sun or in a hot car for too long could leach chemicals from the plastic. That means more dangers to your health.

## It Isn't Always Sanitary

Buying bottled is a gamble. You're never sure if the manufacturing plant the water is produced and packaged in meets the regulatory standards for cleanliness.

We'll let this recent FDA case involving [Real Water's bottled alkaline water](#) and hepatitis do the talking.

On the contrary, having a water ionizer that's hooked to your tap means that you can closely monitor the quality of both the unit and your water source. Plus, if you want to bring ionized water with you outside of your house, just grab your favorite tumbler and fill it up!

No waste AND no contamination — things that bottled alkaline water could never give you.

**It's a NO-BRAINER!**  
Bottled alkaline water is **NOT** the best choice.

# 2 ALKALINE WATER VS. REGULAR BOTTLED WATER

## THE PROBLEM

**Regular bottled water not only lacks the nutrients your body needs but also contains hundreds of dangerous microplastics. You'll also face the risk of having plastic chemicals leach into your water if you expose the bottle to too much heat. What's worse is that it costs at least 100 times more than readily available tap water (which isn't the best option, either).**

Just like bottled alkaline water, your bottled water expenses can reach **over \$100 per year** and **almost \$15,000 in 10 years** for only one person. But there are also the uncountable costs of environmental damage, increased pollution, and unsustainable manufacturing practices.

## THE SOLUTION

A water ionizer doesn't need plastic bottles to give you the freshest, cleanest and healthiest water that you deserve! Nor will you need to pay thousands of dollars a year to get it. Plus, unlike water in plastic containers, the best water ionizer will give you water by design for years to come.

# 3 ALKALINE WATER VS. REVERSE OSMOSIS WATER

## THE PROBLEM

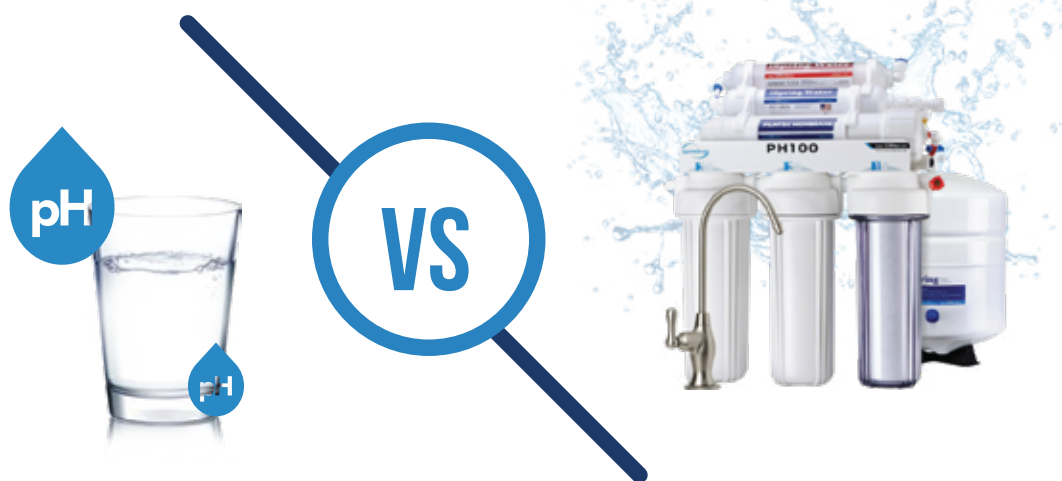

**A reverse osmosis or RO system is a common choice. It does clean your water and is useful in a lot of situations, like during natural disasters, while traveling or during emergencies, but that doesn't mean it's the best.**

Depending on the RO system, the initial investment of \$300 can seem cheap. If you have a plumber install the system, that could reach \$200. However, the costs add up when you need to replace both the filters AND the RO membrane. Filters range from \$50 to \$500 while membranes cost \$50 to \$800. Maintenance and repairs can even reach \$800 annually.

In 10 years, if you change your filters every 6 months and your RO membrane every 2 years, you may end up spending up to \$24,500.

## THE SOLUTION

With a water ionizer, you'll just have to pay for the machine itself and replacement filters every few months. Good companies won't even charge you for service, as long as it's covered by the warranty.

# 3 (Continued) ALKALINE WATER VS. REVERSE OSMOSIS WATER

## Dangers of Reverse Osmosis Water

Like we said, drinking Reverse Osmosis water (RO) is a decent short-term option, but it should **NEVER** be your main water source for the rest of your life or even for three months. Here are the **TOP 3 REASONS** why you shouldn't go for RO.

## It Lacks Minerals

Your body needs minerals to survive and function properly. You get most of them from food, but you also absorb calcium, magnesium, and other essential nutrients from your water.

RO removes everything from your water, **INCLUDING THE GOOD STUFF!** Plus, if you cook with water cleaned through reverse osmosis, it'll lessen the mineral content of your food.

Using RO water means one less major source of minerals.

## It Can Cause Health Problems

The consumption of low-mineral water like RO water over time has been associated with many negative health issues, such as:

- Delayed height development, especially in children
- Weakened teeth and bones in children
- Increased risk for conditions like hypertension, gastritis, and ulcers

Water should nourish you, not hurt you.

## It Can Be Corrosive

Take it from WHO: RO water, which is demineralized, aggressively leaches metals from pipes and containers and carries them into your water. Your glass could then be filled with tiny particles of rust.

If you're getting a filtration system to clean your water, why would you want one that could CONTAMINATE what you drink?

**DON'T GO FOR RO!**  
**Reverse Osmosis Water just ISN'T a HEALTHY OPTION!**

# 4

## ALKALINE WATER VS. TAP WATER

According to the CDC, **more than 90% of the country** relies on public water sources, but tap water still isn't as pure or filtered as it should be. A lot of public infrastructures are outdated and thus filled with rust and other contaminants that end up in your sink.

Still, tap water prices continue to rise. American families spend **a yearly average of \$875** on their residential water bill even when treatment quality is inconsistent despite regulations. In a decade, that's **over \$8,750** on tap water alone.

For a fixed monthly fee of \$25 or a one-time payment of a few thousand dollars, a high-quality water ionizer hooks up to your sink and provides you with clean alkaline water in whatever state you live in.

# 5

## ALKALINE WATER VS. WELL WATER

### THE PROBLEM

Some homeowners may be attracted to having a well so that they're in control of its quality, while others need a well because of where they live.

One of the biggest problems with wells is **WATER SAFETY**, especially with ground pollution, weed killers and agrochemicals spilling into the ground. Even if you need a well at your home, adding extra filtration for your drinking water is a smart idea. 💡

### THE SOLUTION

Compare this to a superior water ionizer that can cost as little as **\$25 a month** - and if you choose a Tyent unit then you'll get a lifetime warranty that covers parts and labor too.

Plus, if you get a portable countertop model, worrying about difficult and permanent installations will be a thing of the past.

# 5

(Continued)

## DANGERS OF WELL WATER

Private wells seem like an attractive alternative, but they're not the easiest to maintain.

Whether or not you're planning on building one for your home, you need to know the **3 MAIN DANGERS** of this kind of water.

### It Gets Polluted

- Agricultural chemicals
- Sewage and human waste
- Nitrate and nitrite
- Heavy Metals
- E. Coli
- Salmonella

And so many other unsavory contaminants from agricultural, commercial, and residential sources. Suddenly, well water doesn't seem too pure.

### It Can Cause Sickness

Consuming contaminated water leads to having a contaminated body.

If you don't test or filter your well water, you and your family could experience these long-term effects:

- Nausea and gastrointestinal issues
- "Blue baby syndrome" for infants
- Organ damage
- Cancer risk

**Dirty well water? OH, WELL!**  
Filtered ionized water is the way to go.

### It Can Cause Sickness

Owning a private well is a big responsibility — literally. Unlike public water systems, they're not subject to EPA regulations and regular testing, so it's all up to you to make sure your well water is potable. We outlined the financial and health costs of well water, so it's up to you to answer the question: is a well worth it?

# 6 ALKALINE WATER VS. CHEAP WATER FILTERS

## THE PROBLEM

You can never be sure of the quality and longevity of a supposedly decent and affordable filter.

Cheap filters remove just the unpleasant odors, bad flavors, and chlorine found in public water systems. Sometimes, they can filter lead.

Harsher chemicals and dangerous contaminants may still float in your water.

These filters may also need to be replaced every 3 months. Additionally, since they're cheap, you may need to buy an entirely new filter after a year or so.

## THE SOLUTION

Your initial \$20 could easily turn into more than \$700 down the drain after 10 years.

Instead of wasting hundreds of dollars on a potentially faulty product, it's much better to invest in a well-made water ionizer that has

# 7 ALKALINE WATER VS. FAUCET FILTER ATTACHMENTS

## THE PROBLEM

At less than \$100, a faucet filter attachment might seem affordable, but they're not the best in the long run.

Let's be honest, a faucet filter attachment sounds like a great solution. Plus, companies like Zero Water make it SOUND LIKE they remove EVERYTHING from your water.

The truth is that it's really just good marketing, and the reality is that it's IMPOSSIBLE for such a small filter to remove much of anything from your tap water, especially dangerous contaminants like lead, pharmaceuticals, mercury and beryllium.

Don't believe the hype on this one. Instead, look for a company that will provide you with a water report that includes tests performed on their filters from a 3rd party lab.

**Another Downside?** Their filter is only good for 1 gallon of water per day (sigh).

## THE BEST SOLUTION

The large multistage filters found in luxury ionizers like **Tyent** are able to filter over 950 gallons for 6 months and remove over 200 contaminants. You get a much greater bang for your buck with this setup.

# 7 (Continued) MORE ON FAUCET FILTER ATTACHMENTS

## THE PROBLEM

If you look at the packaging of a **Zero Water filter**, **Brita filter** or **Pure filter** you'll notice that the list of contaminants that they remove is very vague.

Most brands of these faucet filter attachments only remove chlorine and a few heavy metals. Yet, there are **hundreds of contaminants** found in tap water.

Check out **Brita's packaging** for example - it says it only removes 3 metals (mercury, copper, cadmium), and not even lead.

You'll also notice that they write cleaner **TASTING** water only, and they list odor and taste as what's removed. I don't know about you, but I want the contaminants removed, **not just the taste of the contaminants**.

Plus, since that kind of filter pitcher doesn't ionize your water, your water isn't going to be full of essential minerals and molecular hydrogen (one of the most powerful antioxidants available).

**Bottom Line:** These pitchers give unsuspecting consumers a false sense of security because they don't have the ability to filter out more dangerous chemicals.

## THE BEST SOLUTION

High-end water ionizer filters, like **Tyent** filters, remove 100% of lead, up to 99% of mercury, beryllium and uranium and **over 200 other contaminants like pharmaceuticals, heavy metals and agrochemicals**.

To compare, go to Tyent's website and look at the third party **filter report**. You can't get this type of report from brands like Zero Water, Brita or Pur - so it makes you wonder what they're hiding, doesn't it?

# 8 ALKALINE WATER VS. WATER DELIVERY SERVICES

## THE PROBLEM

If you don't have the time to buy bottled water every day or week, you might consider having it delivered to your home instead. It seems convenient, but did you know that households spend:

- 1 Between \$30 to \$60 PER MONTH on delivery, and
- 2 \$45 PER MONTH on 15 gallons of spring water? Or purified tap water?

**That's \$18,000 in just 20 years! Yikes!**

Remember that bottled water is just basic water without alkalinity, antioxidants, and molecular hydrogen. If you stick with this service, you may even be paying \$30 to \$60 for the rest of your life, and you won't own anything that lasts.

If your favorite brand is unavailable, you may have to hunt for other options in your area. Plus, since services and minimum order quantities vary per company, you'll have to spend a lot of time on finding which works best for you

## THE BEST SOLUTION

A high-end water ionizer's approximate monthly cost is **ONLY \$25** until you pay it off. Afterward, you'll be the proud owner of an ionizing unit that will give you fresh alkaline water every day.

# DO ALL KINDS OF ALKALINE WATER FILTERS HAVE MOLECULAR HYDROGEN?

Sorry! **NONE** of these have  
**MOLECULAR HYDROGEN!**

The answer is a  
resounding

**NO!**

Optimal levels of molecular hydrogen can only be consistently and reliably produced by top-rated water ionizers. So, if you buy bottled alkaline water, an alkaline water stick, or an alkaline water pitcher expecting to have an abundance of this antioxidant in your newly alkalized water, you'll be disappointed.

The effectiveness of molecular hydrogen water doesn't last long. In fact, it only lasts for **18 to 24 hours**, with the beneficial qualities fading after that. So it's important that you drink molecular hydrogen right away when it's fresh, which will maximize its antioxidant potential.

HERE IT IS....

# THE BEST, HEALTHIEST, AND MOST AFFORDABLE SOLUTION

So, what do you need in order to begin drinking the healthiest water on the planet?

**IT'S A WATER IONIZER!**

Buying your own Tyent water ionizer means that you will have:

- ◆ **Freshly ionized alkaline water**
- ◆ **Tons of antioxidants and essential minerals**
- ◆ **A zero-calorie energy boost**

For you and your family every day!

# 7 CRUCIAL THINGS THAT MAKE THE BEST WATER – MADE POSSIBLE ONLY WITH A TYENT WATER IONIZER!

When you get a Tyent water ionizer, you can experience all of the **7 beneficial secrets** we talked about earlier - and more!

Here's a list of the most noteworthy features of owning a Tyent Water Ionizer.

## 1 Powerful Filtration

High-quality water ionizers like Tyent use 2 large filters with Ultra Filtration to remove hundreds of contaminants and sediment from your source water, whether it's from a municipal source or your private well.

To prove this, Tyent includes a comprehensive filter report to show you exactly what their ionizers can remove from your water.

## 2 XTreme Molecular Hydrogen Boost

Get unmatched levels of this powerful molecule with a feature that optimizes production at the same relative pH levels.

That's loads healthier than what normally comes out of your tap.

# 3

## Auto-Fill Quantity Selector

Get the perfect amount of water EVERY SINGLE TIME! Tyent's ultra futuristic Auto-Fill Quantity Selector enables you to do just that.

This feature lets you choose from preset levels or select your own to accommodate the glass and container you want to fill. To activate it, simply wave your hand in front of the machine and watch it work its magic.

# 4

## Multipurpose Water

Alkaline pH water from other sources may be used only for drinking but Tyent Ionizers offer additional BONUS PH LEVELS including Beauty Water!

You can use different pH levels, including Tyent's exclusive TURBO WATER to rinse your vegetables and fruits, and do your laundry, while you can pat acidic water onto your skin to tone it. Both types of water are even great for gardening depending on the preferred pH environment of your plants.

# 5

## Lifetime Warranty and 75-Day Trial

When you shop for clothes, it's easier to check if you've picked a good match when you try them on, right? The same goes for ionizers, which is why companies that believe in their customer's right to choose what's best for them give them **75 days** to see if the ionizer they bring home is the unit they need.

Which water ionizer company offers such a long trial period?

You guessed it! Tyent of course!

Their promise of good service doesn't end there - it lasts for life, with no fine print!

# 6

## Customer-Based Financing

Top-rated companies like Tyent are all about keeping their customers happy and healthy, so they make their ionizers more accessible by offering easy payment plans.

Customers can pay **as low as \$25 per month** until the unit is paid off.
